Pred. No. is the number of results predicted by chance to have a

AC092184 71132 bp DNA linear PRI 12-JUN-2002 Homo sapiens 12 BAC RP11-438L7 (Roswell Park Cancer Institute Human BAC Library) complete sequence.
AC092184 AC013443
AC092184.7 GI:21206067

RESULT 1 AC092184 LOCUS DEFINITION Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
Eukaryota; Metazoa; Chordata; Catarrhini; Hominidae; Homo.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (GNUC. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar. SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the standards - estimated error rate less than 1 per 10,000 bases. Reports of Lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation. QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality STSs are identified using ePCR (Genome Res. 7:541-550) searc of a local database that includes entries from dbSTS, GDB, and local mapping efforts. the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the complement(1. .1448)

Where differences are found these are annotated as variations stogether with a note of the overlapping clone name. Note that the vortication amotoration may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their sequence with the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 20. constructed by the Sanger Centre Chromosome 20. from RPII-179015 bits as 49303 in this sequence. The frue right end of clone RPI-179015 at 19816 in this sequence. This sequence is the entire insert of clone RPS-1167E19 The true left end of clone RPI-179015 at 19816 in this sequence. This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality) as compressions and repeats; all regions were either double-stranded or sequenced with an alternate one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. RPS-1167E19 is from first-her lets and the proup of pieter de Jong. For first-her lets and the proup of pieter de Jong. For

NOTE: This is a 'working draft' sequence. It currently consists of 33 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be
                     Submitted (09-JUN-2000) Masahira Hattori, The Institute of Physical and Chemical Research (RIKEN), Genomic Sciences Center (GSC); Kitasato Univ., 1-15-1 Kitasato, Sagamihara, Kanagawa 228-8555,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the accession number will

Submitted (16-APR-2000) Joint Genome Institute, Lawrence Livermore
National Laboratory, 7000 East Ave., Livermore, CA 94551, USA
Mat and sequence oriented from p telomere to centromere. Cosmid
28310 is separated from BAC 349488 (CIT-B-518-p12) on the left by a
gap of approximately 5 kb, and separated from cosmid F16601 on the
right by a gap of approximately 2 to 8 kb. Additional chromosome
19 map and sequence information may be obtained at:

* NOTE: This is a 'working draft' sequence. It currently consists of 31 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

WINCHEL acid encoding activation induced cytidine deaminase, useful as a target for drug development for immune-related diseases including a target for drug development for immune-related diseases including a target for drug development for immune-related diseases including a target for drug development for immune-related diseases including a target for drug for similar to APOBEC.

XX

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates to an RNA editing enzyme APOBEC.

CAID). AID structurally relates, none used in gene therapy. AID

CAID developed allergy, allergy, allergic for the AID

CAID developed disease, attain a telangiectasia, common variable endelication disease, Disease, Disease, and the antibodies to the AID

CAID disease. AIDS (auto immunodeficiency syndrone), elevated

CAID disease. AIDS (auto immunodeficiency syndrone), elevated

CAID disease. AIDS (auto immunodeficiency syndrone), elevated

CAID disease. AIDS (auto immunodeficiency syndrones)

CAID disease disease allergy and the antibodies to the AID

CAID disease disease and agenomic DNA sequences of thoman AID.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                               The present invention describes an activation-induced cytidine deaminase (AID). AID structurally relates to an RNA editing enzyme APOBEC-1 and has cytidine activity similar to APOBEC-1. AID has antiallergic, antiasthmatic, ophthalmological, antiallergic, dermatological activities, and can be used in gene therapy. AID polynucleotides are useful in methods for identifying drugs for the treatment of B cell associated immune system disorders, immunodeficiency diseases and allergies, such as immunoglobulin A (IgA) deficiency disease, IgA nephritis, gamma-globulinamia, atopic dermatitis, allergic colitis, asthma, food allergy, drug allergy, allergic rhinitis, Rosen immunodeficiency disorder, MIC (major histocompatibility class) class if deficiency disease, AIDS (auto immunodeficiency syndrome), elevated IgE disorder, and IgG subclass selection disorder. The DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       encoding AID may be used for gene therapy and the antibodies to the AID protein may be used for diagnosis and treatment of these disorders. The present sequence represents a genomic DNA sequence of human AID.

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (GCA), by detecting the level of expression of gene(s) (GS) identified by the analysis as given in the specification, and comparing the expression level to an expression level in an unactivated of the expression level in an unactivated of the are modulating (MS) GA by contacting GCA with an agent that alters the expression of at least one gene in GS; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an altergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene(s) from GS, where consult in the step of the gene is indicative of inflammation.

(4) treating (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. MI is useful for detecting GCA; M2 is useful for modulating GA; M3 is useful for screening an agent capable of modulating CGA preferably in an inflammation in a tissue; M4 is useful for response in a subject, exposure of a subject to a pathogen or sterile correcting an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile

```
The invention relates to detecting (MI) granulocyte (GC) activation CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (GCA), by detecting the level of expression of gene(s) (GS) identified by CC (GCA), where differential expression level in an unactivated the expression level to an expression level in an unactivated (GC, where differential expression of GS is indicative of GCA.

Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in GS; (2) screening (M3) CC or an agent capable of modulating GA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (specially chronic) or in a tissue, an inflammation (especially chronic) or in a tissue, con allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, con sterile inflammation (especially chronic) or in a tissue, con sterile inflammation (especially chronic) or in a tissue, con inflammation with an agent that modulates the expression of gene(s) from GS in the tissue. MI is useful for detecting GA; M2 is useful for modulating GA; M3 is useful for screening an agent capable of modulating CC detecting an inflammation in a tissue, M4 is useful for resonnse in a subject to a pathogen or sterile consumer of a subject to a pathogen or sterile consumer of a subject to a pathogen or sterile consumers in a subject to a pathogen or sterile consumers in a subject to a sterile consumer of a subject to a pathogen or sterile consumers in a subject to a sterile consumers in a sterile consumers in a sterile consumers in a sterile consumers in a tissue, an a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inflammatory disease (e.g. psoriasis, rheumatoid arthritis, glomerulonephritis, asthma, thrombosis, cardiac reperfusion injury, ARDS, adult respiratory distress syndrome, inflammatory bowel disease, crohn's disease, ulcerative colitis, parasitic infection, protozoal infection, viral infection, parasitic infection, protozoal infection, fungal infection and MS is useful for treating one of the above conditions. The present sequence represents a gene differentially expressed in granulocytes. Once: The sequence data for this patent did not form part form part format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Detecting granulocyte activation by detecting differential expression of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 response in a subject, exposure of a subject to a pathogen or sterile

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           05-SEP-2000;
                                                                                                                                                                            05-NOV-2001
                                                                                                                                                                                                                                                                                                                                                                                         02-AUG-2001
                                                                                                                                           AAK89461;
                                                                       RESULT
                     g
                                                                                                          AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
co supplement the patients own production of (I). Additionally, (I)
co supplement acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
cancers and cancer metastases of haematopoietic antigen genomic
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK84950 and AAM82169
crepresent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1566

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         21; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       3661
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         novel human colon associated polypeptides of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel human colon associated polypeptides (AAU22468-AAU22701), and the cDNA and genomic sequences encoding for them. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of disorders of the colon including colon cancer, congenital abnormalities (e.g. atrests and stenosis), bacterial and viral infections, inflammatory bowel disease (IBD), neoplastic cell disorders (e.g. polyps and adenomas, Intestinal inflammatory disorders, colitis, colonic inflammation, diarrhoea and dysentery, malabsorption syndromes (e.g. lactose intolerance), intestinal obstruction and sigmoid diseases. The polynucleotides sequences of the invention can also be used in gene therapy. AAS39582-AAS40060 represent DNA sequences encoding for the

                                                                                                            The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschaprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive system antigen of the invention.
                                                                                                                                                                                                                                                                                                                                                                                          Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of the digestive system, particularly cancer and cancer metastases -

(HUMA-) HUMAN GENOME SCI INC

Š Rosen CA, Barash SC,

WPI; 2001-457727/49.

Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the colon and rectum including colorectal cancers and also for testing and detection e.g. diagnosis -

Disclosure; SEQ ID NO: 327; 522pp + Sequence Listing; English.

The present invention provides the protein and coding sequences of a number of colorectal cancer antigens. These are shown in AAI57547-AAI57619 and AAM38569-AAM38641. These can be used in the diagnosis, prevention and treatment of cancer of the colon and/or rectum. The present sequence is a colorectal cancer antigen genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

 Gaps
 rne present invention provides the protein and coding sequences of a number of human digestive system antigens. These can be used in the diagnosis, treatment and prevention of digestive system disorders, including cancer, Meckel's diverticulum, bacterial or parasitic infections, appendicitis, Hirschsprung's disease, chronic colitis or ulcerative colitis. The present sequence is a genomic DNA fragment encoding a digestive everymment.
 Polynucleotides encoding digestive system antigens, useful for diagnosing, treating, preventing and/or prognozing disorders of the digestive system, particularly cancer and cancer metastases -

diagnosis, treatment and prevention of various types of disorders in equal language, reatment and prevention of various types of disorders in equal language, reatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition can be determined by detecting the presence or absence of a mutation in a liver associated polynucleotide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, cardiovascular disorders such as cardiac arrest, cerebrowascular disorders such as cardiac arrest, cerebrowascular disorders such as corneal infection, encourage of the presence of a numerical and infections caused by bacteria, viruses and fungi, coular disorders such as corneal infection, endocrine disorders such as premature labour and infertility, gastrointestinal disorders such as crone and infection, and crossphritis and respiratory disorders such as sathma and pleurisy. The polypeptides can calso be used to aid wound healing, to prevent skin aging due to sunburn, to maintain organs before transplantation, to regenerate tissues and in
 encode
 Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
 Isolated nucleic acid molecule encoding a human liver related protein is used in preventing, treating or ameliorating disorders of the liver particularly cancer of the liver -
 Sequences AAS31827-AAS32182 represent genomic DNA molecules, which en the liver associated polypeptides of the invention. Liver associated polypeptides and their associated polynucleotides are useful in the

 The present invention provides the protein and coding sequences of a number of human reproductive system related antigens. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a protein of the invention.

 Sequence 9, Application US/08367841A
Patent No. 6319687
GENERAL INFORMATION:
APPLICANT: Chader, Gerald J.; Rodriguez,
APPLICANT: Tombran-Tink, Joyce
TITLE OF INVENTION: PIGMENT EPITHELIUM
TITLE OF INVENTION: DERIVED FACTOR: CHARACTERIZATION GENOMIC
TITLE OF INVENTION: ORGANIZATION AND SEQUENCE OF THE PEDF GENE
 DB 4; Length 4421;
 fragment Derived from human placental genomic DNA; Also referred to as JT101
 Indels
 Score 218.6; DB 4;
